Workers' Compensation Board of B.C. Statistics 1999

BC W6 B:S 1999

Introduction

This report on statistics is published annually as a complement to the operational and financial reviews covered in the annual report of the Workers' Compensation Board of B.C.

Statistics '99 contains statistics on three key areas of operation: claims, assessments, and prevention. This information provides both a general overview of the workers' compensation system, and trends of key statistical indicators. To allow for valid comparisons, the format of the tables and exhibits have been kept as consistent as possible with those used in previous years' editions of this report.

Statistics '99 has a new table that breaks down accepted fatal claims by injury and disease category, and shows ten years of history on this basis.

Several tables in Statistics '99 present information by subclass. These tables are: Tables A-1, number of claims first paid in 1999 by type of subclass and claim; Table A-1, historical by subclass; Table A-1, number of fatalities, 10-year

counts of fatal claims by subclass; Table A-2, claim costs charged by subclass and type of claim; Table B-1, days lost and accident type by subclass; and Table B-2, injury rates and claim durations by subclass. The Classes of Industry listing starting on page 65 lists the types of employers that make up each subclass.

The publication Occupational Injuries by Accident Type and Occupation in British Columbia, 1997 and 1998 is also available. Order your copy from the WCB Publications and Videos at 604 276-3068, toll free 1 800 661-2112, local 3068, or fax 604 279-7406. For more detailed statistics on specific topics, contact the WCB Statistical Services Department at 604 276-3130, or send your information request by fax to 604 276-3290. Reported Claims

The number of claims reported to the WCB in 1999 was 178,168 — a 0.8 percent decrease from the 179,582 claims reported in 1998.

First payment was made for 147 occupational deaths in 1999. Twenty-five of the 147 cases were pensioners who died from causes related to their compensable injuries or diseases. The 147 fatal claims first paid in 1999 cannot be compared to the 179 fatalities in the above chart because some of the fatalities first paid in 1999 occurred in and were reported in a prior year, and because some of the reported fatalities are not compensable. The 179 fatal claims tabulated in the above chart are broken down in the table on the opposite page. The 147 fatal claims first paid in 1999 are broken down by subclass in Table A-1.

^{&#}x27; There were 78 fatal claims accepted in 1999 in which the death and accident occurred in the same year. For some of the 78 cases the death and accident occurred prior to 1999. The numbers for the other years are on the same basis.

¹ This classification according to agency is done by the WCB.
² As of January 1, 1995, the WCB assumed inspectional jurisdiction of fishing fatalities that occur "close-to-shore."

Number and Costs of Claims

During the year, 136,741 claims were paid for the first time. Of those:

65,398 were health-care-only claims (formerly called medical-aid-only claims)

68,671 were short-term disability claims (formerly called wage-loss claims)

were long-term disability claims (formerly called permanent disability claims)

147 were fatal claims

Supreme Court, benefits, short-term disability benefits, and capitalized values of pension awards, which are reserves set aside for present and future payments of long-term and the 1999 figure excludes \$7,028,815 for that reason. The benefit liabilities figures shown in Note 7 of the WCB 1999 Annual Report are calculated on a Compensation costs totalled \$902,490,206 in 1999, compared to \$837,399,393 in 1998. The figures include health-care benefits, vocational rehabilitation different basis and are not comparable to these total compensation costs.

Due to rounding, totals may not balance.

The total cost of \$902,490,206 was calculated on a different basis than the total claim liability figure in Note 7 of the WCB 1999 Annual Report. Both the 1998 and 1999 cost totals exclude the increase in widows' pension entitlement arising from Bill 63 and the 1997 B.C. Supreme Court decision. A subclass breakdown of claim costs is provided in Table A-2 of this report

Short-term disability is the term for what was called wage loss in 1991 and earlier versions of this exhibit.

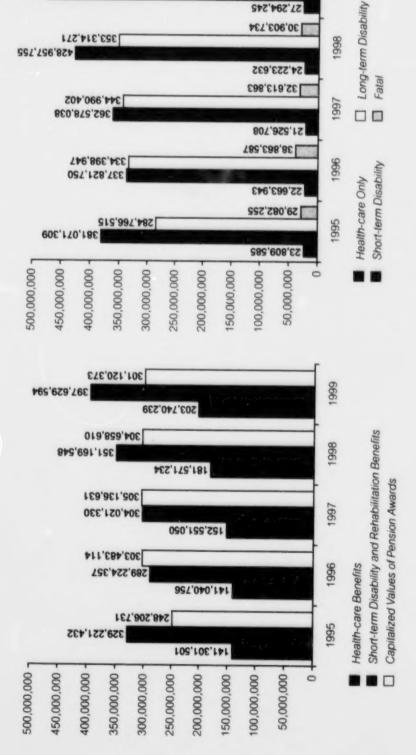

Long-term disability is the term for what was called permanent disability in 1991 and earlier versions of this exhibit.

Key Indicators in Statistics '99

This series of charts of 10-year trends in important statistical indicators appeared for the first time in *Statistics* '92. While none of the indicators has changed dramatically from one year to the next over the last 10 years, there have been some significant trends.

The first chart shows that one of WCB's most important statistical indicators, the injury rate, has declined steadily since 1990. The injury rate is the number of short-term disability claims per one 100 person-years of covered employment (100 person-years is the equivalent of 100 full-time employees). For the purpose of the injury rate calculation, the number of "short-term disability," claims is the number of claims accepted for short-term disability, long-term disability, or survivor benefits either in the year of injury or in the first quarter of the following year. The estimates of person-years are based on gross payrolls that covered employers report to the Board.

In 1994, Bill 63 covered a number of industry groups under the Workers Compensation Act for the first time. The 10-year charts in this section exclude the Bill 63 industries so that the 10-year trend is valid. The 5-year trend shown in Table B-2 is on the "including Bill 63" basis.

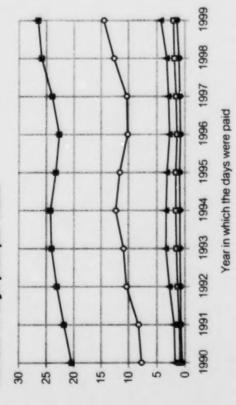

The second indicator relates to the first. The fatality rate is the number of accepted fatal claims per 100 person-years of covered employment. The fatality rate has also shown an overall downward trend over the last 10 years.

The third chart shows claim duration as measured in days per claim. Five components of duration are shown: days lost per claim in the injury year, and days lost per claim in each of the four years following the injury year. This is the AWCBC recommended method of showing duration that Canadian Boards have adopted as a standard. The chart shows that duration has generally increased since 1990.

The fourth chart shows the percentage of short-term disability claims represented by claimants whose injuries were back strains. Back strains are the type of injury the WCB sees most often. They have accounted for approximately 25 percent of all short-term disability claims for each year in the past 10 years.

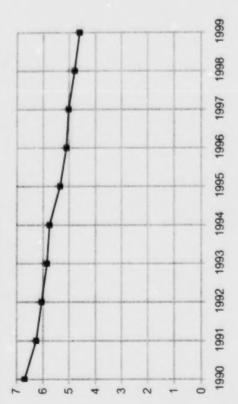

The next two charts reflect shifts in the population of covered workers. The fifth chart shows that the percentage of claimants who are female has increased from 21 percent in 1990 to 29 percent in 1999; the sixth chart shows that the percentage of claimants younger than 25 years of age has decreased from 20 percent in 1990 to 14 percent in 1999.

The "days lost" in 1999 are the days paid in 1999 on current 1997 and prior years' claims.

The following is an analysis by industrial group of the days lost in 1999 and the number of short-term disability, long-term disability, and fatal claims first paid in 1999. The industrial groups are formed from combinations of the subclasses described in "Classes of Industry" on page 65.

Some claims are classified according to the location of the head office of the firm rather than according to the actual location where the injury occurred.

Claims uncoded at year-end have been allocated proportionately to the regional districts.

Short-term disability is the new term for what was called wage loss in 1991 and earlier versions of this table.

Long-term disability claims is the term for what were called permanent disability claims in 1991 and earlier versions of this table.

Includes capitalized values of pension awards, not monthly pension payments. These figures include the \$7,028,815 increase in survivors benefits arising from the B.C. Supreme Court Ruling. These claim costs are as charged in the year and, therefore, are on a different basis than the liabilities shown in Note 7 of the WCB 1999 Annual Report.

⁶ Due to rounding, the regional totals and the grand totals may not balance.

' Claims can be reported in one year and paid in the next; some of the paid claims in this table therefore are not part of the total of claims reported in the Reported Claims table.

For example, if a claim counted this year as a short-term disability claim in Table A-1 becomes a long-term disability claim next year, a count would be added to next year's long-term disability count and subtracted from next year's short-term disability count. The count of short-term disability claims in Table A-1 can Claims can change "Type" categories from one year to the next. The claim counts by type are therefore adjusted in order that claims aren't double counted. therefore be thought of as being the number of claims that get short-term disability benefits, but don't go on to get long-term disability or survivor benefits. Similar adjustments are made for changes between other type categories.

3 For a complete description of the subclass numbers, see "Classes of Industry" on page 65.

4 Health-care-only claims is the term for what were called medical-aid-only claims in 1991 and earlier versions of this table.

Short-term disability claims is the term for what were called temporary total claims in 1991 and earlier versions of this table.

Long-term disability claims is the term for what were called permanent disability claims in 1991 and earlier versions of this table.

7 These claims were uncoded to subclass at year-end.

The figures for 1999 shown in this table are the overall total numbers from Table A-1 shown on page 23.

For a complete description of the subclass numbers, see "Classes of Industry" on page 65.

³ Of the two claims accepted in class 5 in 1996, one was a transfer from subclass 0902 (carcinogen exposure was determined to have been in more than one subclass). The other claim arose from an injury to a worker on a training course while on WCB benefits for a previous injury. Class 5 claims first paid in 1998 and 1999 are claims uncoded to subclass at year-end.

Some claims accepted for fatal benefits have been previously accepted for long-term disability benefits. An example of claims in this category are disease claims like silicosis.

² For a complete description of the subclass number see "Classes of Industry" on page 65.

³ This is the total of the preceding class totals.

^{*} The silicosis fund was collapsed at the end of 1992. Silicosis fatalities in later years are classified by subclass in the same way that other fatalities are.

One of these fatals was a transfer from subclass 0902 (carcinogen exposure was determined to have been in more than one subclass). The other fatality occurred to a worker on a training course while on WCB benefits for another injury.

Claims Accepted for Fatal Benefits in 19991

² Health-care-only claims is the term for what were called medical-aid-only claims in 1991 and earlier versions of this table.

Short-term disability claims is the term for what were called temporary total claims in 1991 and earlier versions of this table.

Long-term disability claims is the term for what were called permanent disability claims in 1991 and earlier versions of this table.

Survivor benefits is the term for what were called costs for fatal claims in 1991 and earlier versions of this table.

^{*} These claims costs are calculated on a different basis than the benefit liabilities shown in Note 7 of the WCB 1999 Annual Report.

⁷ These additional survivor benefits arose from the 1997 B.C. Supreme Court decision regarding the reinstatement of widows' benefits.

Rehab costs were included in "Other Costs" in 1997 and prior versions of this table. In this table, rehab costs are distributed among the different subclasses.

⁹ Due to rounding, the class and subclass totals may not balance.

Health-care-only claims is the term for what were called medical-aid-only claims in 1991 and earlier versions of this table.

Short-term disability claims is the term for what were called temporary total claims in 1991 and earlier versions of this table.

Long-term disability claims is the term for what were called permanent disability claims in 1991 and earlier versions of this table.

Survivor benefits is the term for what were called costs for fatal claims in 1991 and earlier versions of this table.

These claim costs are calculated on a different basis than the benefit liabilities shown In Note 7 of the WCB 1999 Annual Report.

Survivor benefits in 1993, 1994, 1997, and 1998 include the additional reserves required by Bill 63 and the 1997 B.C. Supreme Court decision, both of which \$377,426,893, 1998 — \$3,843,658, and 1999 — \$7,028,815. The overall totals minus these amounts for the four years are: 1993 — \$720,622,060, 1994 increased the benefit en litement of dependants of deceased workers. These amounts were: 1993 — \$90,414,635, 1994 — \$15,555,606, 1997 \$753,732,746, 1997 — \$761,709,010, 1998 — \$837,399,393, and 1999 — \$902,490,206.

Short-term disability claims is the term for what were called wage-loss claims in 1991 and earlier versions of this table.

Long-term disability claims is the term for what were called permanent disability claims in 1991 and earlier versions of this table.

Claim counts by type of accident have been adjusted for the effect of uncoded claims and therefore appear as rounded numbers.

For a complete description of the subclass number see "Classes of Industry" on page 65.

[&]quot;Days lost" are as paid in the year on current and prior-year claims.

Overexertion and bodily motion incidents usually result in strains, tenosynovitis, and related conditions.

The number of claims shown under Section 39 represents only those claims where all claim costs were assigned to Section 39.

The number of claims shown under class 5 are those claims uncoded to subclass at year-end.

This table gives a historical summary of selected statistics from Tables B-1 and D.

Days lost" are as paid in the period on current and prior-year claims.

³ These statistics are based on short-term disability, long-term disability, and fatal claims first paid in the year. Health-care-only claims are not included.

⁴ The gender counts are rounded and therefore may not add up to the total.

Subclasses with an asterisk have relatively few disability claims, so the durations and injury rates have high statistical variability.

"Short-term Disability Claims" is the number of claims accepted for short-term disability, long-term disability, or survivor benefits either in the year of injury or in the first quarter of the following year.

based on gross payrolls submitted by employers and matching Statistics Canada wage-rate data (source: 72-002). This method of estimating person-years One person-year is the equivalent of 52 paid weeks of employment, whether worked by one individual or several. Subclass estimates of person-years are is in accordance with a convention established by the Association of Workers' Compensation Boards of Canada.

according to a convention established by the AWCBC. There are a number of different methods that can be used to calculate duration, so comparisons of Total claim duration is a measure of the total days lost per claim on disability claims, including days lost in years beyond the year of injury. It is calculated duration statistics from different sources should be made carefully.

"Days lost" for subclasses 411, 643, 748, 902, and 911, where compensation is frequently paid on a "calendar day" basis, have been adjusted so that they are on the same "work day" basis as the other subclasses.

⁶ Revised figures.

1999 person-years are based on preliminary estimates of payroll. 1999 claim counts are estimated.

Injury rates of less than 0.5 are shown as 0.

These subclasses have existed only since 1994 (only since 1995 in the case of subclasses 671, 672, and 673), so complete duration can be computed only for 1998 and 1999 (only for 1999 in the case of subclasses 671, 672, and 673).

Because of the difficulty in calculating estimates of person-years for subclass 911 (subclass 911 employers don't report gross payrolls in the same way as employers in other rated subclasses do), no injury rates are calculated for subclass 911.

The all subclass figures include deposit account subclasses (not shown individually) as well as the rateable subclasses that are shown individually. The allsubclass figures include the Bill 63 subclasses for the first time. The all subclass injury rates excluding the Bill 63 subclasses are 1995 — 5.3, 1996 — 5.1, 1997 — 5.0, 1998 — 4.8, and 1999 — 4.6.

¹ Short-term disability claims is the term for what were called temporary total claims in 1991 and earlier versions of this table.

² Long-term disability claims is the term for what were called permanent disability claims in 1991 and earlier versions of this table.

³ Claims uncoded to age and gender have been proportionately allocated, and the counts rounded to the nearest five. Therefore, columns and rows may not add up to the totals shown.

Includes classes 18 and 38, and Section 39 of the Workers' Compensation Act.

Number of short-term disability, long-term disability, and fatal claims accepted in the year.

^{2 &}quot;Days lost" are as paid in the period on current and prior-year claims.

Includes short-term disability, long-term disability, and survivor benefits charged in the period on current- and prior-year claims. Excludes the increase in widows' pension entitlement arising from Bill 63 and the 1997 B.C. Supreme Court decision.

[&]quot;Occupational Disease" includes traumatic tenosynovitis, traumatic bursitis, and related conditions in this table.

The claim counts, days lost, and claim costs by injury category have been adjusted for the effect of uncoded claims and appear as rounded numbers. The columns therefore do not add up to the column totals shown.

Assessment Statistics

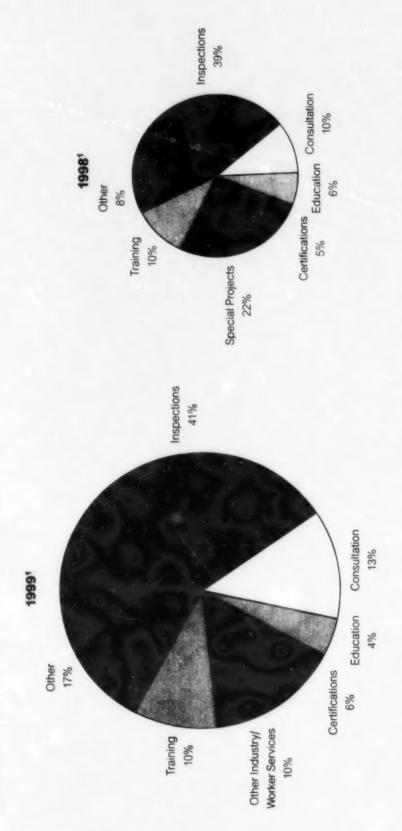

Assessable Payroll

Assessable payroll includes those portions of earnings up to the maximum wage rate — \$56,900 in 1998 and \$57,500 in 1999. Assessment statistics for the past five years are as follows:

Year	Number of Employers at December 31	Assessable Payroll	Premiums	Maximum Wage Rate
1995	146,293	\$44,616,000,000	\$987,418,000	\$52,400
1996	152,316	\$46,283,000,000	\$1,008,650,000	\$54,200
1997	156,233	\$48,635,000,000	\$1,002,000,000	\$55,800
1998	161,770	\$49,845,000,000	\$929,971,000	\$56,900

Prevention Statistics

Breakdown of Field Officers' Activity Time

(TARS) as a more accurate source for prevention field officer time reporting at the end of 1998. The 1998 breakdown is derived from the TARS system. Due to the differences in the way in which activity data is collected and reported in the two systems, the breakdowns of time are only roughly comparable between 1999 activity breakdowns are derived from the Prevention Mobile Office System. This system replaced the Prevention Time and Activity Reporting System the two years.

Prevention Field Activity¹ Document and Activity Hours Summary

	1999	1998
Inspection Hours	139,631	93,895
Education Hours	15,352	8,411
Consultation Hours	43,607	15,745
Certifications	20,083	5,155
Other Industry/Worker Services	32,960	10,991
Total	251,633	134,197

Inspections	34,264	31,661
Education Reports	1,819	686
Contact Records	12,575	4,639
Orders	54,001	48,072

Field Activity hours are reported through the Prevention Mobile Office system. Prior to June 1998, the MOS system did not capture certification activity and captured only a portion of other field activity time. As a result, 1998 total hours reported are significantly lower than the totals reported for 1999.
